+

App.js

```
import React from 'react';
import './App.css';

import { Home, View1, View2 } from 'components'

export default class App extends React.Component {
  render() {
    return (
      <div className="App">
        <Home />
        <View1 />
        <View2 />
      </div>
    );
  }
}
```

React Router

Routes.js

```
import React from "react";
import { Route, Switch } from "react-router-dom";
import { Home, View1, View2 } from 'views'

export default class Routes extends React.Component{
  render() {
    return (
      <Switch>
        <Route
          exact
          path="/"
          key="Home"
          component={Home}
        />
        <Route
          path="/something"
          key="Something"
          component={View1}
        />
        <Route
          path="/something-else/:myParam"
          key="SomethingElse"
          component={View2}
        />
      </Switch>
    )
  }
}
```

React Router

App.js

```
import React from "react";
import { BrowserRouter as Router } from "react-router-dom";
import Routes from './Routes'

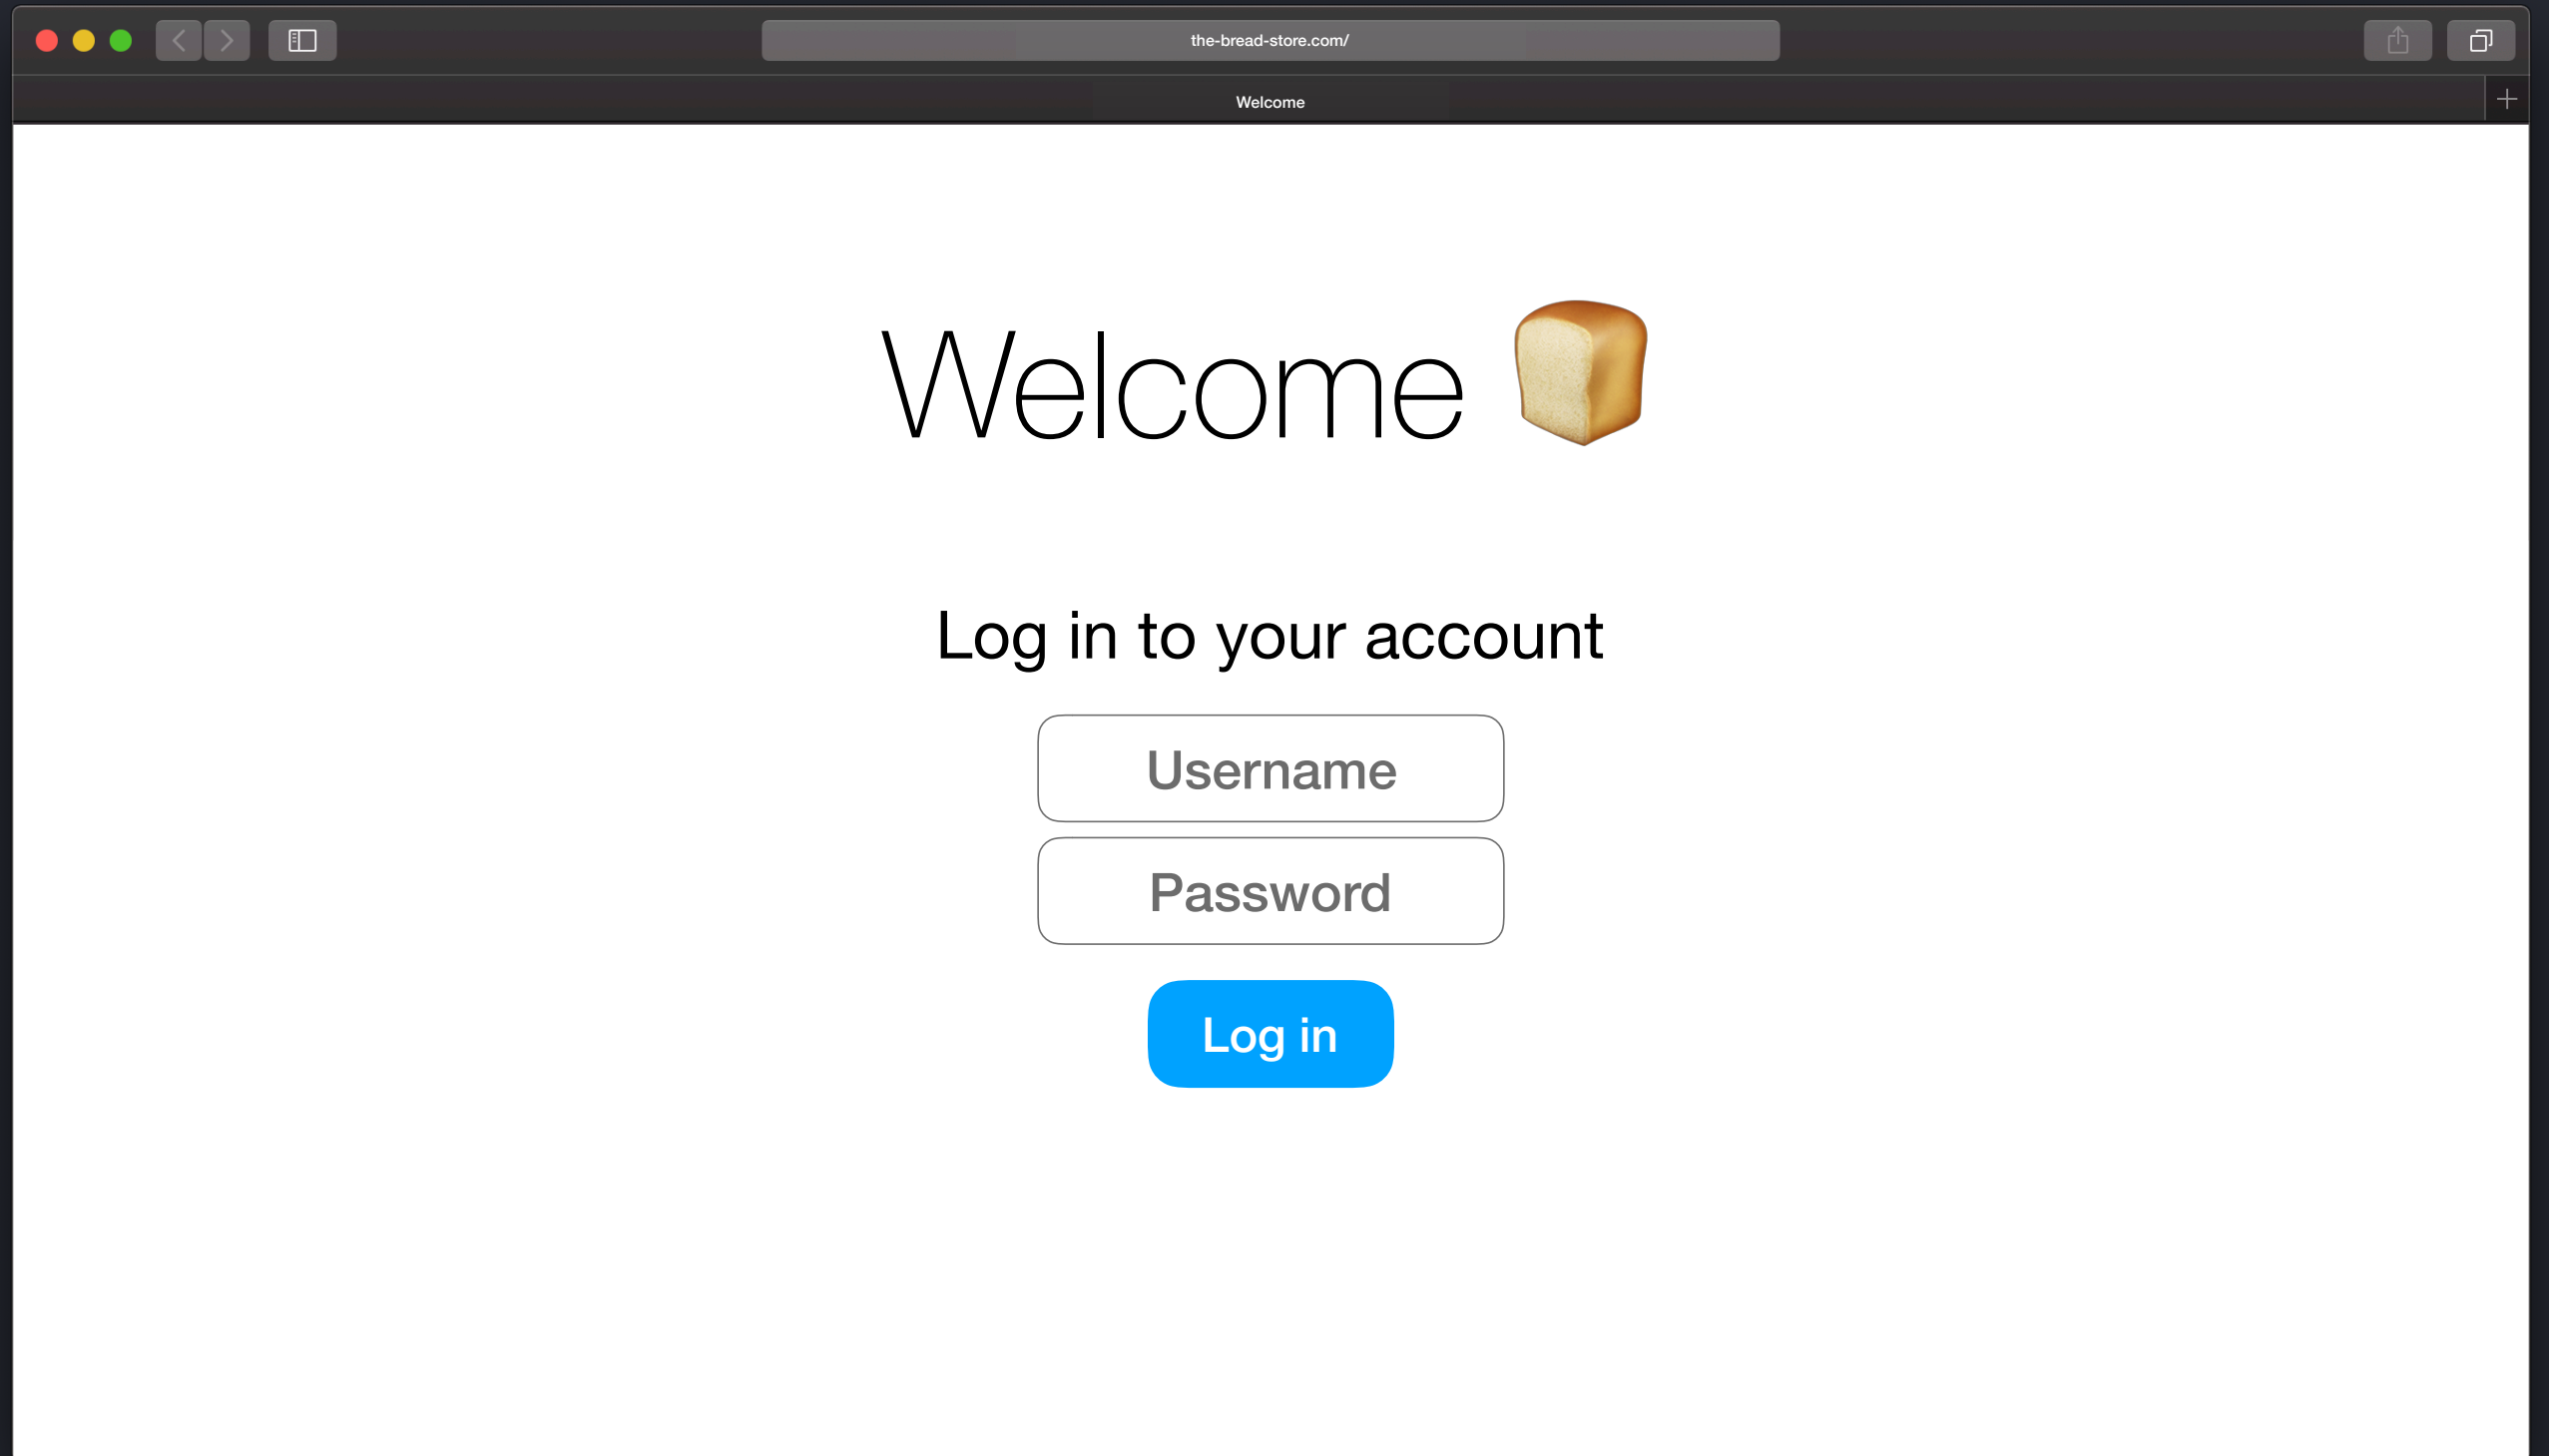

export default class App extends React.Component {
  render() {
    return (
      <div className="App">
        <Router>
          <Routes />
        </Router>
      </div>
    );
  }
}
```

Let's help Robert

Mind the
typo

```
git clone https://github.com/hacker-marfia/module-4-activity
```

Select the quantity of

Continue

Total: \$0.00

Buy

```
import React from 'react'
import { Route, Switch } from 'react-router-dom';
import * as Views from 'views'

export default class Routes extends React.Component {
  render() {
    return (
      <Switch>
        <Route
          exact
          path="/"
          key={'Home'}
          component={Views['Home']}
        />
        <Route
          path="/order"
          key={'Order'}
          component={Views['Order']}
        />
        <Route
          path="/buy"
          key={'Buy'}
          component={Views['Buy']}
        />
      </Switch>
    );
  };
};
```
